PA-5000 Series

Key Security Features:

CLASSIFY ALL APPLICATIONS, ON ALL PORTS, ALL THE TIME WITH APP-ID™.

- Identify the application, regardless of port, encryption (SSL or SSH) or evasive technique employed.
- Use the application, not the port, as the basis for all safe enablement policy decisions: allow, deny, schedule, inspect, apply traffic shaping.
- Categorize unidentified applications for policy control, threat forensics, custom App-ID creation, or packet capture for App-ID development.

EXTEND SAFE APPLICATION ENABLEMENT POLICIES TO ANY USER, AT ANY LOCATION, WITH USER-ID™ AND GLOBALPROTECT™.

- Agentless integration with Active Directory, LDAP, eDirectory Citrix and Microsoft Terminal Services.
- Easily integrate firewall policies with NAC, 802.1X wireless, Proxies and NAC solutions.
- Deploy consistent policies to local and remote users running Microsoft Windows, Mac OS X, Linux, Android or iOS platforms.

PROTECT AGAINST ALL THREATS—BOTH KNOWN AND UNKNOWN—WITH CONTENT-ID™ AND WILDFIRE™.

- Block a range of known threats including exploits, malware and spyware, across all ports, regardless of common threat evasion tactics employed.
- Limit unauthorized transfer of files and sensitive data, and control non work-related web surfing.
- Identify unknown malware, analyze it based on more than 100 malicious behaviors, then automatically create and deliver protection in the next content update.

PA-5050

PA-5020

The Palo Alto Networks® PA-5000 Series is comprised of three enterprise security platforms, the PA-5060, the PA-5050 and the PA-5020, all of which are targeted at high speed datacenter and Internet gateway deployments. The PA-5000 Series delivers up to 20 Gbps of throughput using dedicated processing and memory for the key functional areas of networking, security, threat prevention and management.

The controlling element of the PA-5000 Series is PAN-OS™, a security-specific operating system that natively classifies all traffic, inclusive of applications, threats and content, then ties that traffic to the user, regardless of location or device type. The application, content, and user—in other words, the business elements that run your business—are then used as the basis of your security policies, resulting in an improved security posture and a reduction in incident response time.

PERFORMANCE AND CAPACITIES[1]	PA-5060	PA-5050	PA-5020
Firewall throughput (App-ID enabled)	20 Gbps	10 Gbps	5 Gbps
Threat prevention throughput	10 Gbps	5 Gbps	2 Gbps
IPSec VPN throughput	4 Gbps	4 Gbps	2 Gbps
Max sessions	4,000,000	2,000,000	1,000,000
New sessions per second	120,000	120,000	120,000
Virtual systems (base/max[2])	25/225	25/125	10/20

[1] Performance and capacities are measured under ideal testing conditions using PAN-OS 6.0.
[2] Adding virtual systems to the base quantity requires a separately purchased license.
